## Parkers Pterodactyl eggs repo

I am working on adding a large collection of public eggs for the Pterodactyl community.

With that I am also accepting PR's for new services and also updates to the current ones.

If you are submitting PR's try and keep names and titles the same.

### How to import an egg

If you are reading this it looks like you are looking to add an egg to your server.

1. Download any of the json files located in the folders below.
  1. It's easiest to right click the [raw](#) button and save as.
2. In your panel go to the [Nests](#) section in the admin part of the panel
3. Click the green [Import Egg](#) button
4. Browse to the json file you saved earlier
5. Select what nest you want to put the egg in.
  1. If you want a new nest you need to create it before importing the egg.

**You must restart your daemon after importing an egg if you are using 0.7. This is not required on 1.X**

**Please read the CONTRIBUTING.md before submitting PRs**

### Bots

Discord

**Note:** these are actual Discord bot eggs, NOT language eggs. The old language eggs (discord-js-generic, discord-py-generic, etc) have been moved to the generic languages section.

- Aoede Rust
- ATL Bot Node JS
- Bastion Node JS
- CorpBot Python
- Dynamica Node JS
- fragbot Golang
- Game Server Watcher Node JS

- 
- JMusicBot Java
  - Muse Node JS
  - parkertron Golang
  - pixel-bot Python
  - Redbot Python
  - Ree6 Java
  - SinusBot

#### Other

- Big Brother Bot

#### Twitch

- PhantomBot
- SogeBot

#### TeamSpeak3

- JTS3ServerMod

### **Generic Languages**

- C#
- elixir
- dart
- deno
- golang
- java
- lua
- nodejs
- bun
- nodemon
- python
- rust

### **Database**

#### **In-Memory Databases**

Redis

- 
- Redis 5
  - Redis 6
  - Redis 7

## **noSQL**

- MongoDB
- rethinkdb

## **SQL Databases**

- MariaDB
- PostgreSQL

## **Voice Servers**

- Lavalink
- Teamspeak\_ARM64
- TeaSpeak
- TS3-Manager

## **Game Eggs**
