## Jitsi Meet on Docker

Jitsi is a set of Open Source projects that allows you to easily build and deploy secure videoconferencing solutions.

Jitsi Meet is a fully encrypted, 100% Open Source video conferencing solution that you can use all day, every day, for free — with no account needed.

This repository contains the necessary tools to run a Jitsi Meet stack on Docker using Docker Compose.

All our images are published on DockerHub.

---

## Supported architectures

Starting with `stable-7439` the published images are available for `amd64` and `arm64`.

## Tags

These are the currently published tags for all our images:

Tag	Description
<code>stable</code>	Points to the latest stable release
<code>stable-NNNN-X</code>	A stable release
<code>unstable</code>	Points to the latest unstable release
<code>unstable-YYYY-MM-DD</code>	Daily unstable release
<code>latest</code>	Deprecated, no longer updated (will be removed)

## Installation

The installation manual is available [here](#).

## Kubernetes

If you plan to install the jitsi-meet stack on a Kubernetes cluster you can find tools and tutorials in the project [Jitsi on Kubernetes](#).

## TODO

- Builtin TURN server.
