Supported runtimes and operating systems

- .NET Framework 4.5.2 or higher
- Supported operating systems (32- and 64-bit)
 - Windows 11
 - Windows Server 2022
 - Windows 10
 - Windows Server 2019
 - Windows Server 2016
 - Windows 8/8.1
 - Windows Server 2012
 - Windows 7
 - Windows Server 2008 R2
- For older systems please use Quasar version 1.3.0

Compiling

Open the project [Quasar.sln](#) in Visual Studio 2019+ with installed .NET desktop development features and restore the NuGET packages. Once all packages are installed the project can be compiled as usual by clicking [Build](#) at the top or by pressing [F6](#). The resulting executables can be found in the [Bin](#) directory. See below which build configuration to choose from.

Building a client

| Build configuration | Usage scenario | Description |
|-----------------------|----------------|---|
| Debug configuration | Testing | The pre-defined Settings.cs will be used, so edit this file before compiling the client. You can execute the client directly with the specified settings. |
| Release configuration | Production | Start Quasar.exe and use the client builder. |
