Feel free to submit pull requests to add new games and improve information about those already in the database.

How to contribute

Check `games.yaml` out. All information is inside, and you should more or less understand what's going on by reading it. Sorting is alphabetical.

Simplest way to contribute: edit `games.yaml`, and then your changes will be submitted as a pull request.

Use this template:

```
1 - name: hangman
2   url: https://man.openbsd.org/hangman.6
3   info: computer version of the game hangman
4   screencast:
5   play:
```

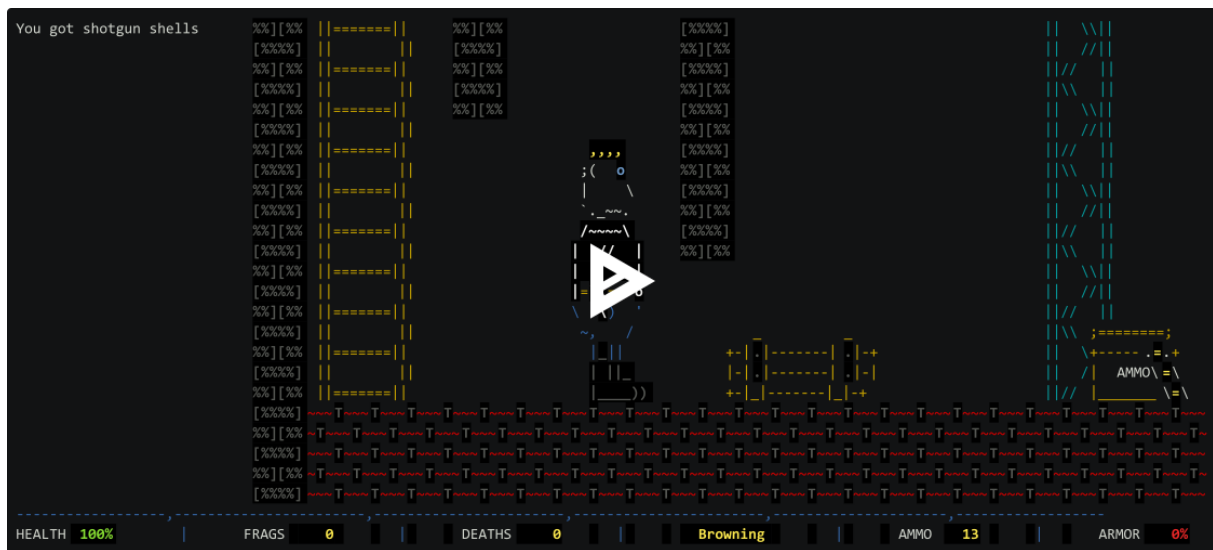

- `name`: Name of the game
- `url`: URL of main page
- `info`: free text with game description
- `screencast`: link to screencast (for example on asciinema)
- `play`: server hostname where game is available via telnet or ssh

robots

A screenshot of the 'robots' game terminal window. The window has a dark background with a light-colored border. On the left, a game map is displayed using symbols: '+' for robots, '*' for junk heaps, and '@' for the player. The player is currently at the bottom right of the map. On the right side of the window, a menu is visible with sections for 'Directions:', 'Commands:', 'Legend:', and 'Score:'. The 'Directions:' section lists movement keys like 'y', 'k', 'u', '\', '/', 'h', 'l', '/', '\', 'b', 'j', 'n'. The 'Commands:' section lists actions like 'w' for wait, 't' for teleport, 'q' for quit, and 'A' for draw screen. The 'Legend:' section defines the symbols used on the map. The 'Score:' section shows the current score as 0.
