
Kaeru

Kaeru can switch ViewController in UINavigationController like iOS task manager UI (after iOS 9).

Movie

9:41

< Back

Now is 2th page.

You can press [ShowList] or [ShowHistory]
buttons

When [ShowList] pressed, push to List
ViewController

When [ShowHistory] pressed, see the history
of snapshot about ViewController from
UINavigationController.viewControllers stack.

And you can tap ViewController, when close
history and return in choose ViewController.

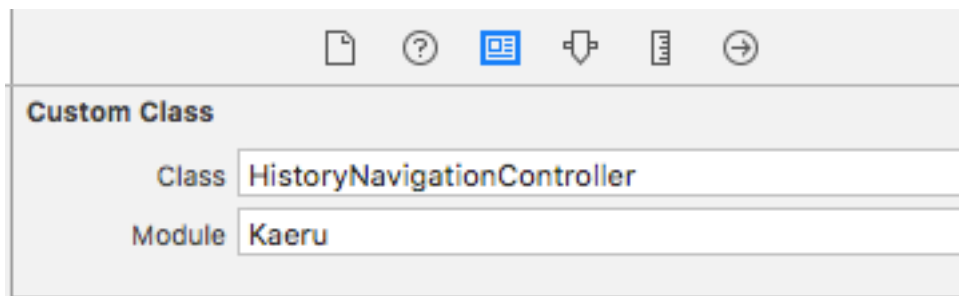

ShowHistory ShowList

Usage

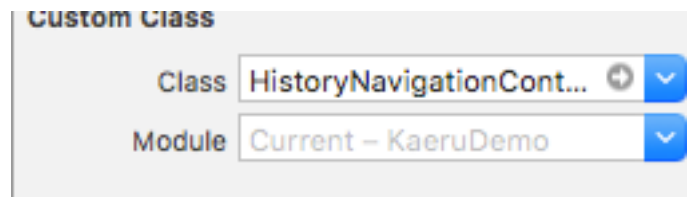

You can use `HistoryNavigationController`, that sub class of `UINavigationController`. It can be used like `UINavigationController`.

e.g

On storyboard

If you install through CocoaPods.

If you install through download or git clone.

Swift code in AppDelegate

```
1 func application(application: UIApplication,
2   didFinishLaunchingWithOptions launchOptions: [NSObject: AnyObject]?)
3   -> Bool {
4     // Override point for customization after application launch.
5
6     let viewController = UIViewController()
7     let navigationController = HistoryNavigationController(
8       rootViewController: viewController)
9
10    window?.rootViewController = navigationController
11
12    window?.makeKeyAndVisible()
13
14    return true
15 }
```

And you can call `self.navigationController?.presentHistory()` in `UIViewController` sub class. After it, appearance would change like iOS task manager UI.

```
1 @IBAction func showViewerButtonPressed(sender: AnyObject) {
2     navigationController?.presentHistory()
3 }
```

And it's possible to tap each `ViewController` snapshots. After it, begin scale animation and called automatically `UINavigationController.popToViewController`.

Customize

When called `HistoryNavigationController.presentHistory()`, it's possible to set a custom `backgroundView`.

```
1 let view = UIView(frame: UIScreen.mainScreen().bounds)
2 view.backgroundColor = .redColor()
3 navigationController?.presentHistory(view)
```

This sample code write and run, when `HistoryNavigationController` appear, background becomes red.

TODO

- ☒ Support cocoapods.
- ☒ Support Carthage.
- ☐ Add delegate methods.
- ☐ Test.
